1 Compilation

```
;; brew tap railwaycat/emacsmacport
;; brew install emacs-mac --with-mac-metal --with-natural-title-bar --with-native-compilation
↪ --with-xwidget
```

2 Basic

2.1 ID

```
(setq user-full-name "Leo Aparisi de Lannoy"
      user-mail-address "leoaparisi@gmail.com")
```

2.2 Good defaults

```
(setq-default
  delete-by-moving-to-trash t           ; Delete files to trash
  window-combination-resize t         ; take new window space from all other windows
  ↪ (not just current)
  x-stretch-cursor t)                 ; Stretch cursor to the glyph width

(setq undo-limit 80000000               ; Raise undo-limit to 80Mb
      evil-want-fine-undo t           ; By default while in insert all changes are one
  ↪ big blob. Be more granular
      auto-save-default t             ; Nobody likes to loose work, I certainly don't
      truncate-string-ellipsis "... " ; It's nice to maintain a little margin
      scroll-margin 2)

(display-time-mode 1)                 ; Enable time in the mode-line

(unless (string-match-p "^Power N/A" (battery)) ; On laptops...
  (display-battery-mode 1))           ; it's nice to know how much power you have

(global-subword-mode 1)               ; Iterate through CamelCase words
```

2.2.1 Browser

```
(setq browse-url-chrome-program "brave")
```

2.2.2 Which-key

```
(setq which-key-idle-delay 0.5 ;; Default is 1.0
      which-key-idle-secondary-delay 0.05) ;; Default is nil
(setq which-key-allow-multiple-replacements t)

(after! which-key
  (pushnew! which-key-replacement-alist

```

(defun org-mks-pretty (table title &optional prompt specials)
  "Select a member of an alist with multiple keys. Prettified.

```

TABLE is the alist which should contain entries where the car is a string.
There should be two types of entries.

1. prefix descriptions like `(\ "a" \ "Description\ ")`
This indicates that ``a'` is a prefix key for multi-letter selection, and that there are entries following with keys like `\ "ab" \ , \ "ax" \ ...`
2. Select-able members must have more than two elements, with the first being the string of keys that lead to selecting it, and the second a short description string of the item.

The command will then make a temporary buffer listing all entries that can be selected with a single key, and all the single key prefixes. When you press the key for a single-letter entry, it is selected. When you press a prefix key, the commands (and maybe further prefixes) under this key will be shown and offered for selection.

TITLE will be placed over the selection in the temporary buffer, PROMPT will be used when prompting for a key. SPECIALS is an alist with `(\ "key" \ "description\ ")` entries. When one of these is selected, only the bare key is returned."
